Geofences outside groups (100)

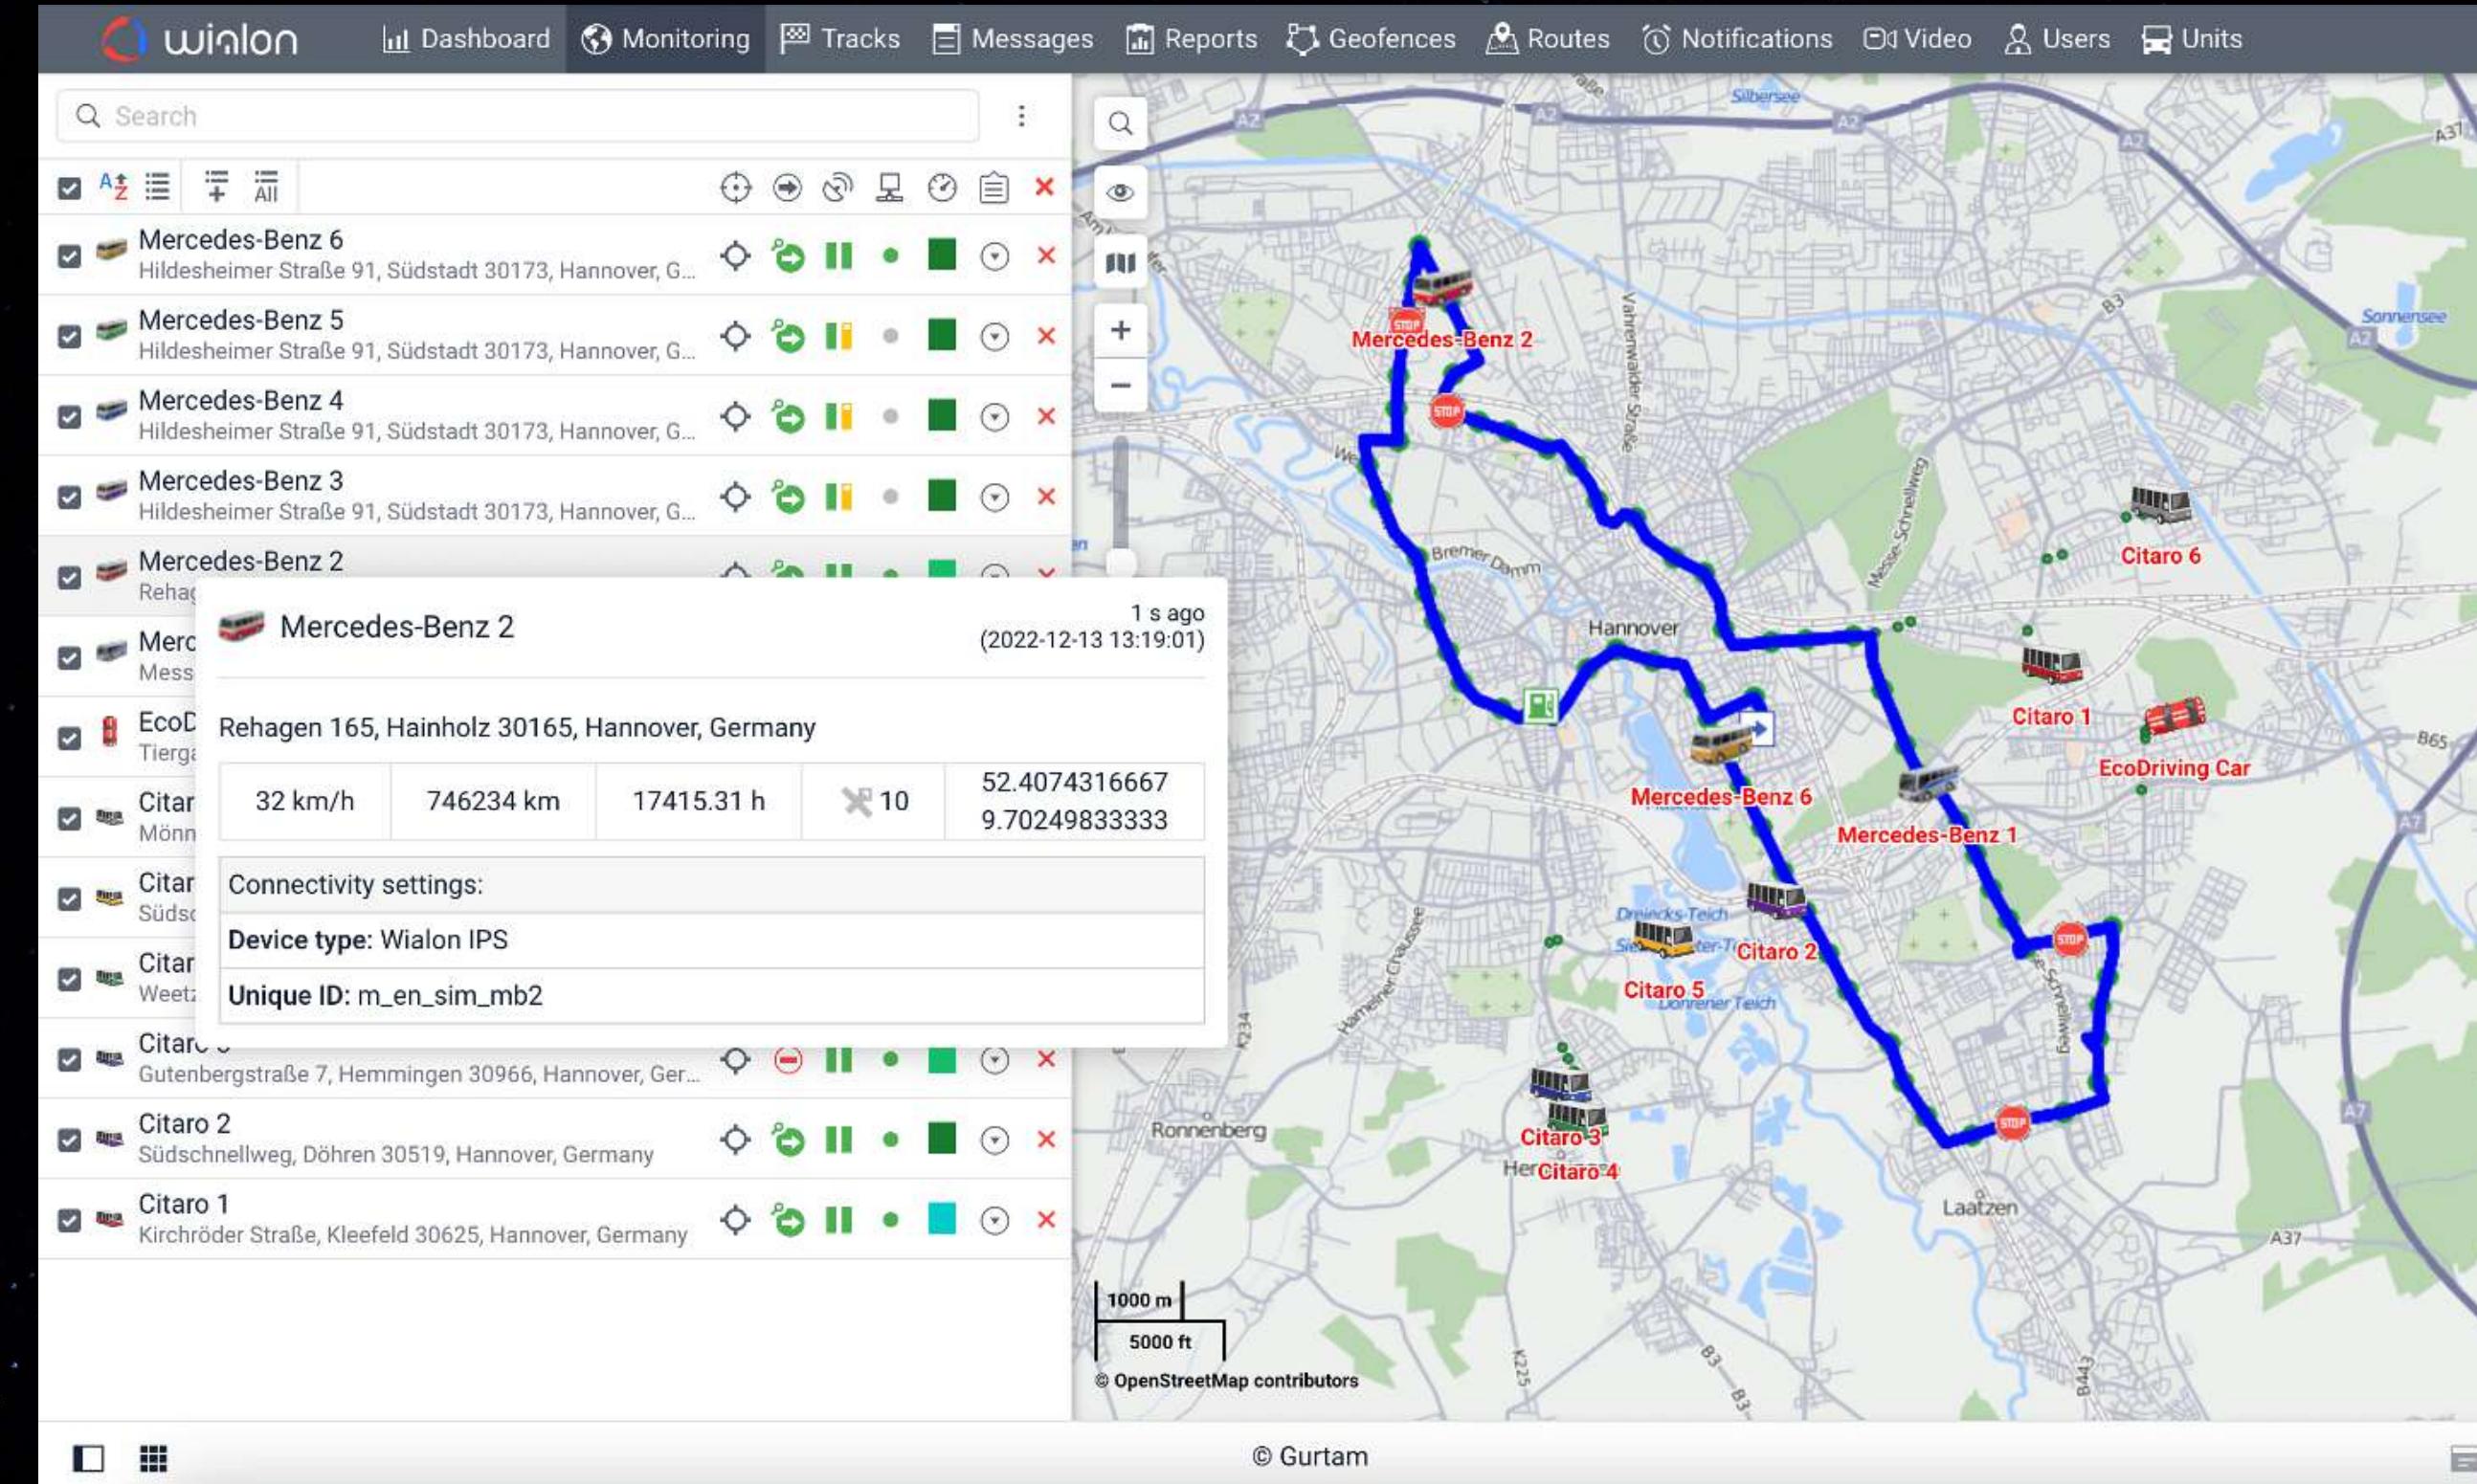

The map displays the city of Hannover with various geographical features like lakes (Silbersee, Sonnensee, Blauer See) and parks. Two geofences are visible: a red polygon covering the central city district and a green circle labeled 'EcoDriving Car' located near the center. The map includes a scale bar (1000 m / 5000 ft) and a copyright notice for OpenStreetMap contributors.

The dashboard features a dark theme with blue highlights. The video streams are displayed in a grid format, and the overall design is clean and modern.

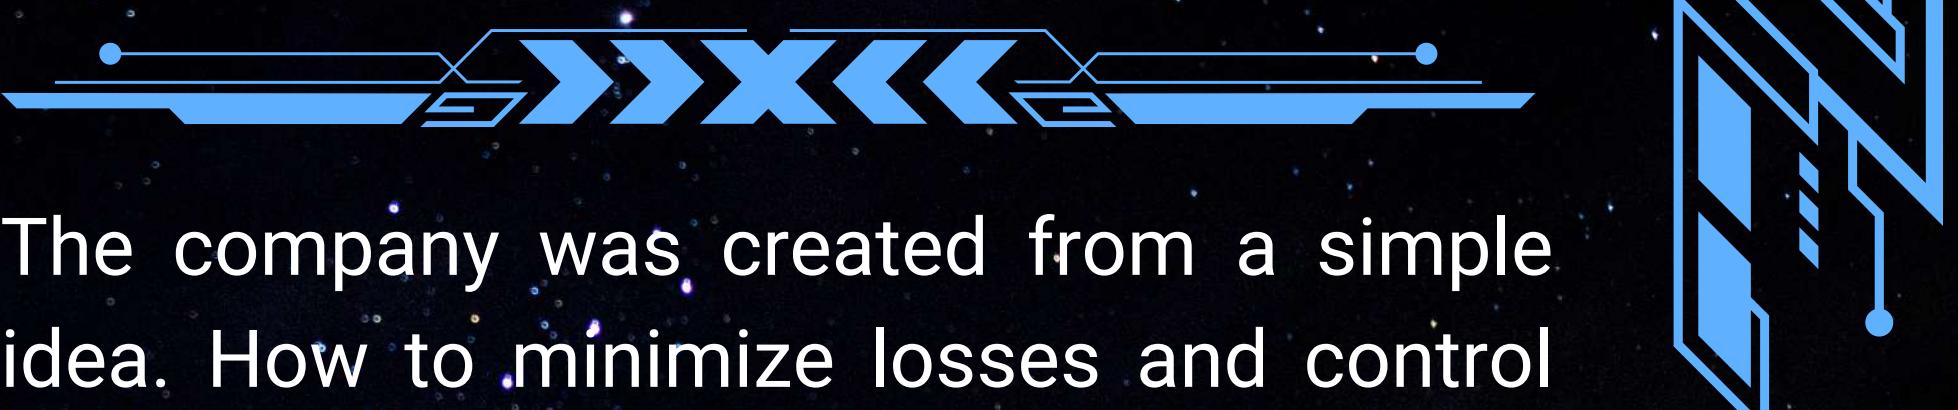

Technology Is Important For Your Business Development

Technology became an important part of a well developed and organized company. We customize technology for our clients to be enjoyable and helpful in reaching their targets and fulfilling their goals.

About us

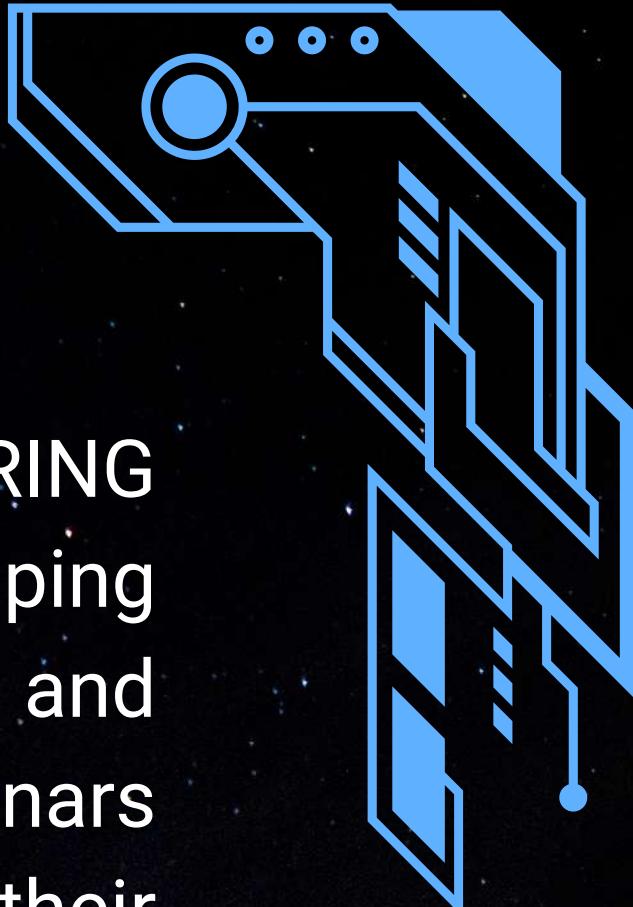

The company was created from a simple idea. How to minimize losses and control fuel consumption on our equipment. After many research we successfully integrated with TECHNOTON JV as a seller and repair center for Africa , then we opened up to become a partner with WIALON by GURTAM one of the leading tracking software provider in the world.

Vision

TRACKING AND MONITORING TECHNOLOGY ENTERPRISE is developing based on the field requirements , Staff and management are following seminars webinars training to develop their capabilities and stay competitive by providing the best and latest knowledge.

The company is always looking for new opportunities and services in telematics and software development by integrating with other leading companies in such fields.

Mission

We strive to offer our clients based on our experience and their vision with innovative cloud-bases automation, IoT, GIS and software.

Our mission to be the most dynamic IoT & Telematics company in Nigeria and West Africa.
